

GRP Enclosures

A versatile range of maintenance free industrial enclosures for a wide variety of applications
Manufactured from resins conforming to BS476:
part 7: class 2 (surface spread of flame).

The structure is designed to withstand wind and snow loading to BS 6399 Part 2: 1997.

Snow loading on roof are based on 1.8 km².

Environmental protection is to BS5490 IP55

Plain semi gloss smooth gel coat exteriors are offered in a full range of BS 4800 or RAL colours.

We also offer external finishes, which include textured, simulated brick or stone.

The brick and stone effect have been designed for environmentally sensitive locations and can be enhanced by the addition of simulated slate roofs and simulated wood grain doors.

Enclosures are normally pre-assembled and delivered to site via HIAB (crane off load) vehicle subject to satisfactory site access for off loading onto a suitable concrete base

Electrical installations are available to client's individual requirements. All installations are carried out to IEE 16th edition regulations by qualified electrical engineers. All installations unless specifically requested terminate at an RCD/MCB protected distribution board.
